- Click on the **Worker Nodes** tab to note the cluster's Public IP.

## Containerize your Flask application

The screenshot shows a Visual Studio Code editor with a Dockerfile open in the Explorer. The Dockerfile contains the following instructions:

```
1 # Dockerfile, Image, Container
2 FROM python:3.8
3
4 ADD main.py .
5
6 RUN pip install requests beautifulsoup4
7
8 CMD ["python", "./main.py"]
```

The terminal at the bottom shows the output of the `script-docker` command, which builds the Docker image. The output includes the following steps and their durations:

- [internal] load build context: 0.0s
- transferring context: 1.36s
- CACHED [1/3] FROM docker.io/library/python:3.8:sha256:b3b5338cac8f5c27838c4e136a3cd891dd237829e0c4a3a8929c186bb18954: 0.0s

The terminal also shows the command `script-docker` being executed.
